

CryptoBridge Global@TH

Real-time & Batch ETL pipeline using **Kafka, Spark, HDFS, and BI dashboards**

Giorgi Kurtanidze

Levan Dalbashvili

Irakli kereleishvili

Problem Statement

- Binance **stopped P2P trading in Thailand** → launched **Binance TH**
- Business wants to analyze **cross-border crypto transfers** from **BinanceGlobal** → **Binance TH**
- Goal: **insights on user behavior, volume trends, and fraudrisks**

Who is Target Audience?

1. Business Stakeholders / Binance TH Management

2. Risk & Compliance Teams

3. Product & Strategy Teams

Data Sources

Binance TH

Binance Global

Faker

BitKub

Script Configuration & API Rate Limits

Binance TH

Current Synchronous Approach:

3

transactions/second (configurable)

⚡ Max practical rate: ~10 tx/sec

Single-threaded: Sequential processing

Potential Async Scaling:

⚡ Max rate: 50-100+ tx/sec

Multi-threaded: Concurrent processing

Binance

- **Data Range:** 365 days (1 year of historical data)
- **Symbols:** 6 total (3 Global + 3 Thailand)
- **Interval:** Daily klines (1d)
- **Batch Size:** 1,000 records per API call
- **Rate Limiting:** 0.5 second delay between requests

API Rate Limits

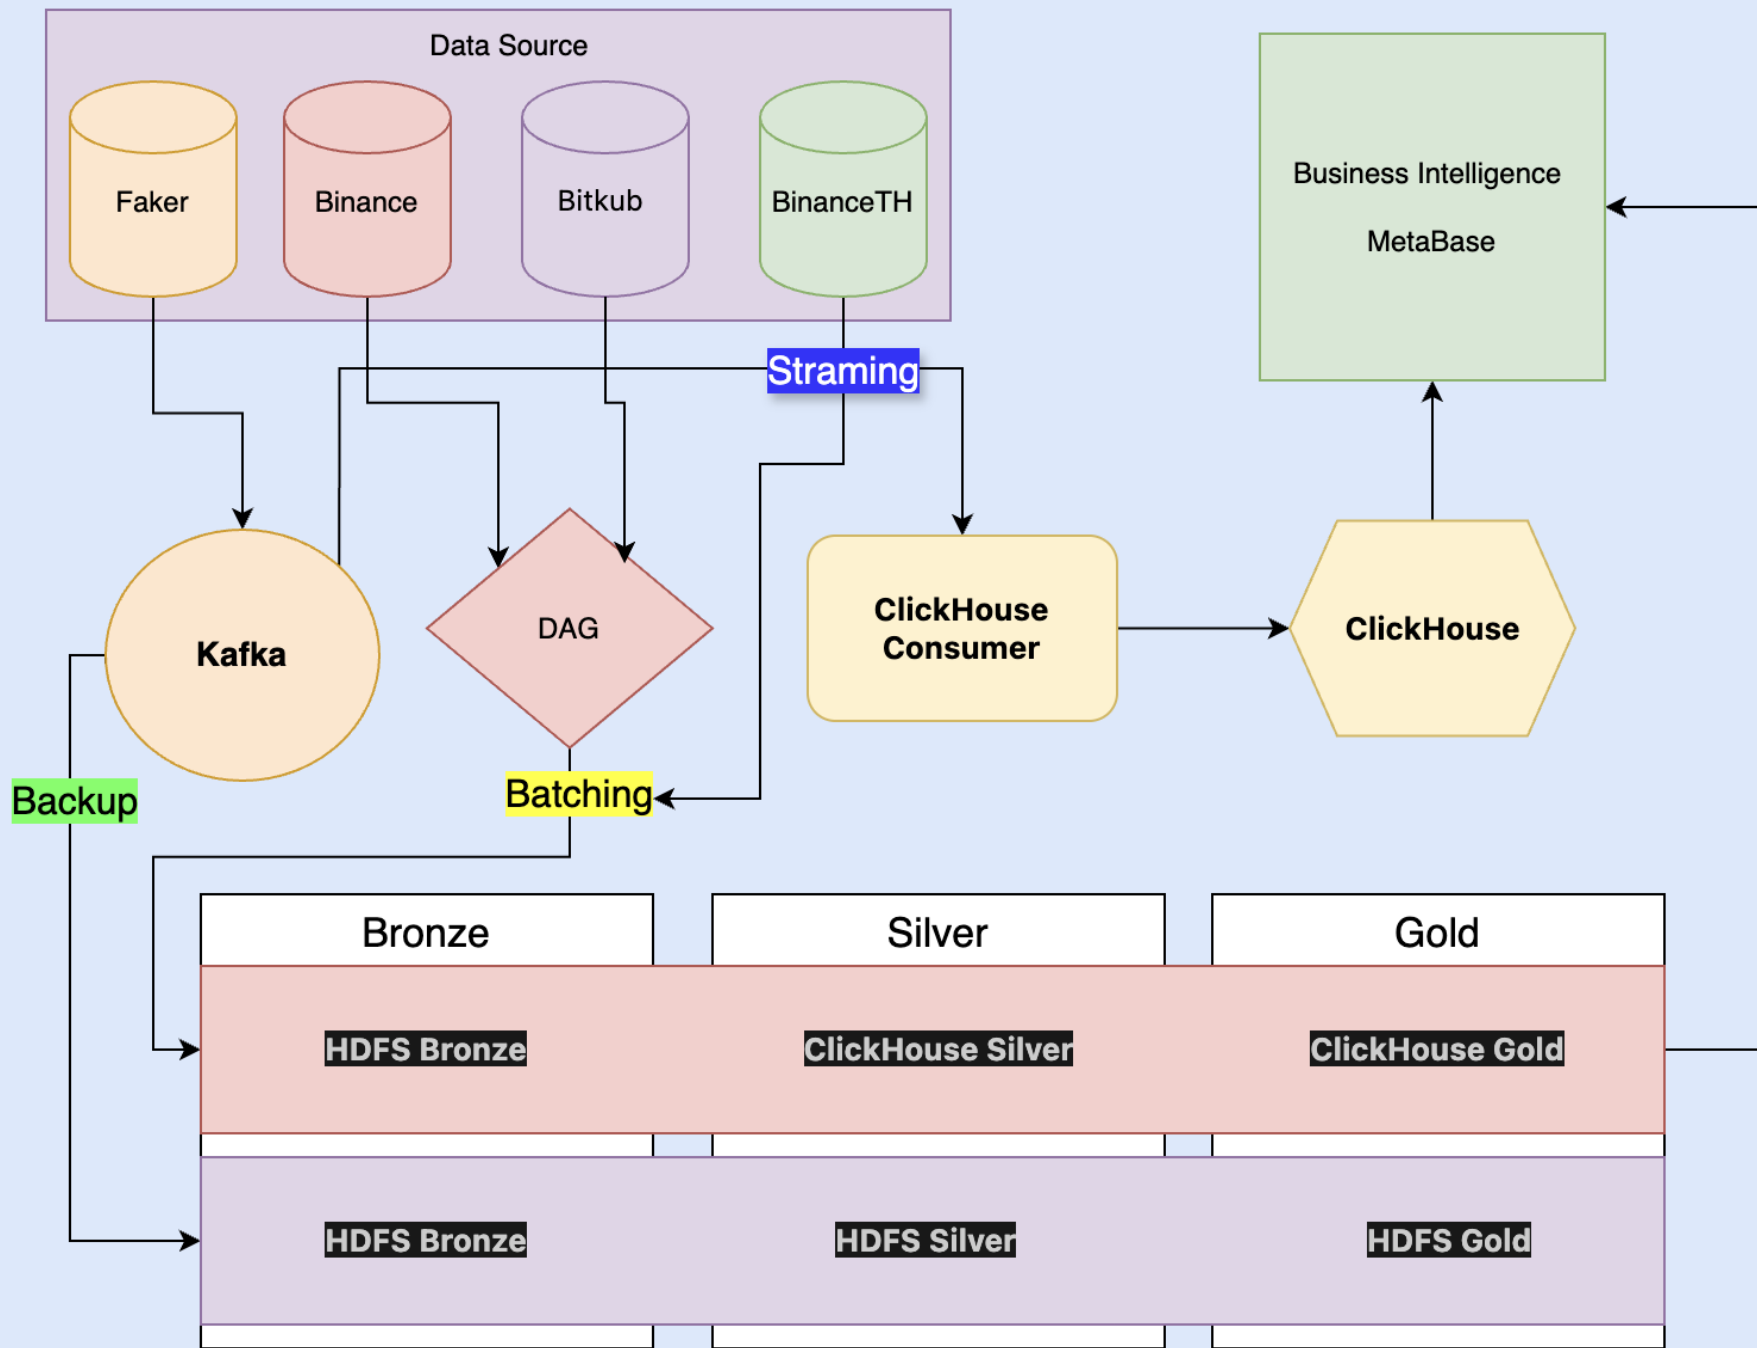

Binance Global API:

- **Request Limit:** 1,200 requests/minute
- **Max Records:** 1,000 per request

TH Binance Thailand API:

- **Request Limit:** ~600 requests/minute (estimated)
- **Max Records:** 1,000 per request

THANK YOU FOR YOUR ATTENTION
